CEFLP-R-1/59  
28 August 1959UNITED STATES INTELLIGENCE BOARD  
REPORT BY THE  
COMMITTEE ON EXPLOITATION OF FOREIGN LANGUAGE PUBLICATIONSTRANSLATION OF SOVIET SCIENTIFIC AND TECHNICAL LITERATURE  
BY THE INTELLIGENCE COMMUNITY AND  
ITS AVAILABILITY TO THE GENERAL PUBLIC

The intelligence community, represented by the USIB member agencies, has been keenly aware of the importance of following Soviet scientific and technical literature and as early as 1947 began the development of facilities to process this material. At that time only 65 journals and a small number of books were available and the early effort was directed toward the production of selected abstracts of significant articles. By 1950, 150 journals were released by the Soviets for export and more thorough coverage of the material was provided by the intelligence agencies. Today 440 scientific and technical journals, issued from 4 to 36 times per year, are available and are being processed by the USIB agencies to the extent of their capacity within budgetary limitations.

Production of information in English from this material has averaged 41,450 pages per year from 1950 through 1958. Currently, the community is producing at the annual rate of approximately 148,000 pages in English from these sources in the fields of chemistry, physics, biology, astronomy, earth sciences, electronics, mathematics, medicine, metallurgy, and engineering. Although this represents only approximately seven and one-half percent of the information contained in this literature, it nevertheless represents a volume equal to something over three complete sets of the Encyclopedia Britannica per year.

This material, produced from unclassified sources, has been increasingly valuable. It was obvious to the intelligence agencies from their earliest efforts that if this material could be made available to US scientists, research institutions and industrial organizations, a substantial benefit to the nation could result. The agencies had neither authority nor funds and facilities for accomplishing general public dissemination and there was no established mechanism in government which could accept copies and reproduce and disseminate them. In October 1953 the Library of Congress established its "Scientific Translation Center" which was designed to publicize, and make generally available for a fee, translations of foreign scientific articles. Intelligence agencies responded by providing translations directly or through the National Science Foundation. The Library of Congress discontinued this service in December 1956 and under Atomic Energy Commission and National Science Foundation subsidy, the Special Libraries Association's Translation Center

FOR OFFICIAL USE ONLY

FOR OFFICIAL USE ONLY

at the John Crerar Library in Chicago undertook to provide this service. The agencies continued their contributions to Crerar Library, much of it without attribution to the translating organization.

There were many limitations to this process and early in the fiscal year 1959 the Office of Technical Services, Department of Commerce by augmentation of its budget was able to initiate a similar activity. While this Office is limited by the Commerce Department Budget Office as to what comes within the definition of technical information, it is the nearest service to a central government clearinghouse through which the public, particularly the scientific community, may know of the availability and get copies of scientific and technical translations. All producing agencies of the intelligence community cooperate to the fullest extent with this Office as well as with the National Science Foundation and the Library of Congress. More than 330,000 pages of translations from Soviet scientific publications have been made available to the scientific community up to 1 January 1959, and current production continues to be made available by the intelligence community through the Office of Technical Services.

Enclosed are a letter from the Director, Office of Technical Services, Department of Commerce describing their services in the dissemination of Soviet scientific information (Tab A) and a list of titles of Soviet scientific journals currently processed by the intelligence community (Tab B).

August 6, 1959

Mr. John J. Bagnell, Chairman  
The Committee on Exploitation of  
Foreign Language Publications  
Central Intelligence Agency  
Washington 25, D. C.

Dear Mr. Bagnell:

Now that we are entering the second year of our joint activities in the field of dissemination of Soviet and Soviet Bloc information, it seems appropriate to report to your committee on accomplishments to date.

You will remember that shortly before the Russians announced the first satellite, our friends in the National Science Foundation called all pertinent government agencies together to see what might be done to speed the general release of translations, abstracts, reviews, and similar materials prepared by government units for internal use. It was generally agreed that the Department of Commerce was the logical communications mechanism between the government and the scientific community. When this matter was brought to the attention of the Secretary of Commerce, he agreed to seek funds for a clearinghouse of foreign science and technology to collect, catalog, announce, and supply such information. Our request for the clearinghouse was approved and we began this operation in the fiscal year 1959.

Here is a resume of current efforts. First, we are offering English translations of three series of the abstract journals known as Referativnyi Zhurnals produced by the Soviet Institute of Scientific Information. These three series are Physics, Biology, and Chemistry. Second, twice each month we distribute a report prepared by the Central Intelligence Agency which summarizes significant Soviet scientific developments. Third, we are distributing a weekly journal on Soviet activities in the international geophysical field.

We are distributing cover-to-cover abstracts of nearly 100 leading Soviet scientific and technical journals. These abstracts,  are available in a short period of time after the original Russian journals are issued in Moscow.

25X1

John J. Bagnell

2

August 6, 1959

We distribute government prepared translations of selected Soviet Bloc materials. Current estimates are that these will run about 10,000 titles a year.

We are producing a carefully indexed journal titled, "Technical Translations," which identifies translations made in and out of government. This journal relies in large measure on the cooperation of the intelligence community, other government agencies, the Special Libraries Association, private translators, and cooperating foreign governments.

We have a network of six depository libraries, including the Special Libraries Association Center at the John Crerar Library in Chicago. They are as follows: Massachusetts Institute of Technology, Georgia Institute of Technology, Pennsylvania State University, Carnegie Library in Pittsburgh, and the University of California at Los Angeles.

We are providing a reference service for these materials whereby inquires as to translations completed or contemplated can be furnished. (I should also have mentioned that "Technical Translations" contains a section titled "Work in Progress" to avoid duplication of effort in translation.)

A new and significant development supplied us by the intelligence community is the "State of the Art" publication which brings together information on outstanding Soviet Bloc scientific developments. It seems to us that such reviews will be the keys which help make useful the large amount of foreign scientific information being released. We anticipate between 25-50 of these a year.

Our program is essentially a cooperative one. We do not produce translations ourselves. We collect them from all sources and provide a communicating link to the scientific community. Although we are still in the early stages, we have some substantial figures to report. For example, since August 1958 over 15,000 issues of the International Geophysical Year weekly have been distributed, 4,000 copies of the Scientific Information Report, and over 21,000 copies of the English abstracts of the leading U.S.S.R journals. For the period January 2, 1959, to August 1, 1959, individual articles, monographic and book translations sold in paper copy form (plus a few items sold in late '58) have reached a total figure of 30,000.

I should also mention that we do not rely on government efforts alone to announce the availability of this material. We have enlisted the cooperation of the technical press and the major abstracting and indexing societies. In fact, we consider their interest and cooperation to be one of the most important factors in prompt and effective distribution.

I cannot stress too heavily the contribution of the intelligence

John J. Bagnell

3

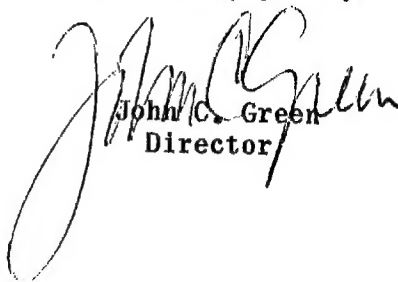

August 6, 1959

community. As you can see from my explanation of our distribution efforts perhaps 75% of our total output derives from work performed under the auspices of the intelligence community. (I gather this volume could be increased if we had the funds and personnel to encompass the materials.)

The program is a unique partnership within government wherein our office provides a channel to U. S. science and industry for the valuable "by-products" of studies carried out by the several components of the intelligence community.

I sincerely hope this program will continue as effectively as to date and welcome this opportunity to express our sincere appreciation for the splendid cooperation we have received.

Sincerely yours,

  
John C. Green  
Director
